

Name: Sujay Sunil Mane

Roll No.: 31010924149

Class: TY BSc IT - B

Batch - 3

Subject : Web Services

Practical - 3

1)Open **IntelliJ IDEA**.

2)Create a new **Spring Boot Project** named **HarshPrac_3**.

3)Add the required dependencies:

- Spring Web
- Spring Web Services
- Spring Boot DevTools

4)Create the required package structure in the project.

5)Create the following Java classes:

- **Application.java**
- **TemperatureService.java**
- **Publisher.java**

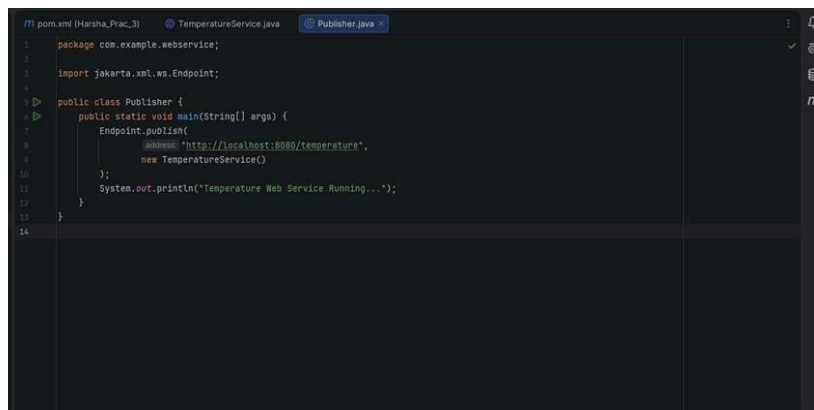

6)Implement the temperature conversion logic in **TemperatureService.java** to convert Celsius to Fahrenheit.

7)Configure the SOAP Web Service in **Publisher.java** using the endpoint URL.

8)Build the project using **Maven**.

9)Run the Spring Boot application from **Application.java**.

10)Wait until the application starts successfully.

```
1 package com.example.webservice;
2
3 import jakarta.xml.ws.Endpoint;
4
5 public class Publisher {
6     public static void main(String[] args) {
7         Endpoint.publish(
8             "http://localhost:8080/temperature",
9             new TemperatureService()
10        );
11        System.out.println("Temperature Web Service Running...");
12    }
13 }
14
```

```
1 package com.example.webservice;
2 import jakarta.jax.WebMethod;
3 import jakarta.jax.WebService;
4
5 @WebService
6 public class TemperatureService {
7
8     @WebMethod
9     public double fahrenheitToCelsius(double f) {
10         return (f - 32) * 5 / 9;
11     }
12
13     @WebMethod
14     public double celsiusToFahrenheit(double c) {
15         return (c * 9 / 5) + 32;
16     }
17 }
```

11)Open **Postman**.

12)Create a new **POST** request.

13)Enter the SOAP service URL:

`http://localhost:8080/ws`

14)In the **Headers** tab, add:

Content-Type : text/xml

15)Select **Body** → **Raw** → **XML**.

16)Paste the SOAP XML request containing the Celsius value.

17)Click the **Send** button.

18)Verify that the SOAP response returns the corresponding Fahrenheit value.

19)Check that the service executes successfully without errors.
